PROFESSIONAL SUMMARY

Full-stack backend software developer with over 6 years of professional experience building scalable web, mobile, and fintech SaaS applications. Specialized in high-performance backend systems, payment gateway infrastructure, and switching solutions using **Java (Spring Boot)**, Go (Golang), Python, and Node.js. Skilled in designing, developing, and deploying secure, high-performance solutions across diverse tech stacks including Laravel, React, Next.js, and Flutter. Adept at collaborating with cross-functional teams to deliver clean, maintainable, and business-driven code for complex financial architectures.

CORE SKILLS

Languages & Frameworks	Java (Spring Boot), Go (Golang), Python, JavaScript/TypeScript, PHP, Laravel, Node.js, Flask, Django, Next.js, Solidity, Flutter, React, React Native
Fintech Ecosystem	Payment Switching Architecture, Gateway-as-a-Service (SaaS) Development, Gin, Echo, Gorm, Goroutines, Channels, Microservices Architecture
Database & Cloud	MySQL, MongoDB, PostgreSQL, Redis, Git/GitHub, Docker, Kubernetes, REST & GraphQL APIs
Methodologies	Agile/Scrum, API Design, CI/CD Pipelines, Unit/Integration Testing, UI/UX Best Practices

PROFESSIONAL EXPERIENCE

Senior Backend Developer | UrbanPay

Jan 2021 – Dec 2024

- Led the strategic transition of legacy monolithic payment services to high-performance microservices using **Java Spring Boot** and Go, improving system throughput and scalability by 50%.
- Designed and engineered core components of a multi-tenant payment gateway as a service (SaaS), allowing fintechs and merchants to securely integrate and process transactions.
- Engineered and optimized backend web services using **Java**, Node.js, Python Flask, and Go, ensuring 99.9% high availability for high-volume payment processing.
- Built and optimized transactional switching logic and database queries to handle complex host/scheme routing, accelerating transaction processing speeds by 30%.
- Leveraged robust multi-threading and concurrency models to seamlessly handle thousands of simultaneous webhooks during peak financial traffic hours.
- Authored comprehensive unit and integration tests within **Spring Boot** and Go ecosystems to ensure absolute code reliability and transaction stability.

Backend Developer | Bolosom

2023 – Present

- Developed robust, secure backend APIs with **Java Spring Boot**, Laravel, Go, and Node.js to support high-traffic mobile and web applications.
- Designed highly scalable database schemas and optimized complex queries for processing performance and low latency.
- Introduced automated CI/CD pipelines and Dockerized development environments to improve deployment efficiency and developer experience.

Full-Stack Developer | IGHUB

2023 – Present

- Built and maintained robust web applications using React, Django, and Next.js, implementing responsive and accessible UI components.
- Developed internal tools to streamline data synchronization and reporting between different stakeholder platforms.
- Collaborated directly with UI/UX designers and stakeholders to translate complex business requirements into scalable technical solutions.

Website Manager | Ukamart

Sept 2022 – Present

- Managed and maintained the company's e-commerce platform for seamless user experience and optimized site performance.
- Optimized SEO strategies and product listings to increase organic traffic and conversions significantly.
- Automated daily product updates using custom scripts, reducing manual maintenance tasks by 40%.

KEY PROJECTS

High-Concurrency Payment Switching Engine: Built a standalone **Java**/**Go** transactional engine capable of routing and processing 10k+ requests per second for core retail and fintech integration.

Crypto Wallet DApp: Created a decentralized crypto wallet using Solidity, **Java**/**Spring Boot** (for secure backend indexing), and React to enable secure digital asset transactions.

Real-time Chat Application: Developed a cross-platform chat app using Go (WebSockets) and React Native for low-latency messaging.

Logistics Tracking System: Developed a real-time tracking system with automated delivery notifications and route optimization.

EDUCATION

B.Sc. Computer Science

2020

Michael Okpara University of Agriculture

ACHIEVEMENTS & INTERESTS

- Active contributor to multiple open-source backend projects focused on developer productivity tools and framework optimizations.
- Keen interest in blockchain technology, smart contract security, and decentralized application development.
- Passionate about mentoring junior developers and promoting clean coding practices, robust architectural patterns, and OOP design.
